

Title:	LCN Senior Swing Now Standard with Reduced Force Opening
Date:	2009/12/18
Product:	Senior Swing
Viewers:	All

The LCN Senior Swing automatic operator will now be offered standard with a reduced force opening! Recent engineering improvements have brought the opening force of the Senior Swing to a comparable force of the previous Middle Swing operator. These improvements recently resulted in the rationalization of the Middle Swing operator now that the Senior Swing has a lower manual opening force and also includes power boost.

Opening force tests on the Senior Swing and Middle Swing were conducted on bench tests and full size doors in our internal test facility. Both the Senior Swing and Middle Swing were mounted to the same door and frame in order to allow for an accurate comparison. It should be noted that external conditions, excessive door weight, and general door/frame abuse can result in an increase to the manual opening force in the field.

Pricing and “how to order” will not be affected by these changes.
